

REDUCE INPUTS, INCREASE YIELDS, HEALTHIER CROPS

WATERTOWN, SD ~ Growing healthy crops and animals has always been a priority for Calvin Mack on his 85-cow dairy farm. Helping support a healthy environment was an added bonus to raising healthy crops and animals. Mack, along with his brother, Clinton, are third-generation farmers on their family's 1,000-acre farm, where they raise alfalfa, wheat, corn, and soybeans and have 190 Angus cow-calf pairs.

Mack looks to all-natural or homeopathic alternatives when the option arises. So it only made sense to try the Answer Products. Mack has known about these biological products for about five years, but never tried them because of skeptics he talked to.

"When we decided to take over the family farm, we looked for things that were better for our operation, specifically all natural," Mack said. "We understand and have experienced the amazing power of all-natural products before, but when we tried the Answer Products last year, we were dumbfounded by the results."

Mack is currently using the Answer Products for all of his crops and pasture and Livestock Answer on the cattle. After initially applying the product to the fields in the spring, Mack noticed a response within a month. "We noticed zero leaf tissue diseases, increased growth and a big difference in the bug infestation reduction. We had virtually no bugs when our neighbors were spraying for them," Mack said.

Mack said he used absolutely no commercial fertilizer last year and plans to not use any this year after using the Answer Products throughout the growing season last year. "Once you understand the biological system you realize it's not necessary to apply commercial fertilizers," Mack added. "With the high input costs of running a farm, everyone is looking for something better and cheaper. The prices of these products didn't even go up from last year like we know all commercial products did." Mack said they've already

received healthier crops and higher yields. He said the fields will continue to get progressively better.

"Last year we had 60-bushel soybeans and 200-bushel corn per acre, the best we've ever seen," Mack said. "And I'm hoping for 100-bushel soybeans eventually." Livestock Answer also had a positive effect on Mack's cattle. The digestive enzymes aided in digestion and breakdown of food. Within a week, Mack noticed consistent manure droppings.

"Beforehand, each cow would defecate differently. Our vet even noticed quite a positive difference in the cows," Mack added. There are less flies, odor and according to Mack, the manure is breaking down and bubbling in the lagoon. The Macks have pasture ground that could never support healthy grass growth. After applying the Answer Products, the pasture ground is a popular spot with the cows. "The cattle are always eating in that area," Mack said. "The nitrates have been decreased, resulting in a more healthy, flavorful grass for the cows to eat."

Mack said the best thing about using Answer Products is that it is perfectly safe to use for humans and the environment. "It is actually cleaning up everything we've been using in the past years by digesting toxins," Mack said. "I've told people before, 'Don't take our word for it - try it on 50 acres or so and see for yourself. Use it within your own comfort zone by cutting your commercial fertilizer in half the first year at least. You will be a believer, no matter what type of crops you grow.'"

"We had virtually no bugs when our neighbors were spraying for them," Mack said after using Answer Products
